

Play Care Learning Center Building Design

RIGHT SIDE ELEVATION

NATURAL DAY LIGHTING

Building Features

Play Care Learning Center is a ground up preschool. There is a covered area for drop off/pick up of children, background music in the same area, 100% video coverage inside and out, plugs that are as far out of reach as building codes will allow, automatic sliding doors for parents convenience, electronic check-in, electronic records and many more.

Building Design

Play Care Learning Center is designed with straight sight lines and lots of glass. This facilitates excellent visibility for the fully video monitored campus which allows teachers to easily supervise children (no hidden corners) and cameras to capture everything that goes on.

Security

Security is the number one priority. If you are not an authorized user, the automatic doors will not open. All areas are video monitored. All Play Care Learning Center staff are background checked and Live-Scanned against DOJ and FBI databases to ensure security of staff and students. The facility is fully alarmed and monitored by a professional management company.

Light

Light is important to young minds development. In fact exposure to natural light leads to better learning outcomes of 26% better in reading and 20% better in math. That is why our building is designed with light. It is recommended that children are exposed to 2 hours of outdoor light to prevent the development and progression of myopia.

Fresh Air

Our objective designing our preschool was to make it a place that children and parents alike would want to be and avoid institutional design. All classrooms have opening windows to both the outside and the interior hallway to facilitate natural air movement. We have working louvers in the roof cupolas and fans that aid passive cooling. We have 8 foot porches that run the length of the building for shaded play.

PASSIVE COOLING & VENTILATION
